

February Reflection 2017

February already! The children have settled in really well even the new children have settled with the other children helping to make them feel welcome. The gears have been very popular with many innovative creations being made. We have had a lawn mower that mows the mat and a laser monster getter, all with moving parts. The sensory experiences such as the water and sand have given the children an opportunity to calm their mind and connect with natural materials. We are continually impressed with the children ability to complete puzzles. Many of them are able to complete the ones we have out so it is time to change them to more challenging ones. The hammering experience we have out is an introduction to using tools. It is also a good fine motor experience which assists in writing skills. The shapes the children are using at the Tap Tap supports our STEM goal of learning about geometric shapes. The children really enjoy having a story read to them. Reading to the children as a large or small group or one on one is a priority in our room as so much can be learnt from reading.
