

## May 2017 Reflection

We have just added some new building blocks onto our block corner that lights up depending on which side it sits which helps the children to identify colors, size, shapes and weight. We have extended on our block corner adding all types of vehicles and a set of trains and tracks to help develop and improve the children's creativity, math concepts and their language skills when we count, add or subtract while building a structures or roads, all the while improving their hand-eye coordination to help the younger babies strengthens their fingers and hands. This experience also helps to promote positive social group interactions amongst peers as they are able to share with one another, interact, cooperate and form team work.

We have also been busy extending our creative side through arts and craft busy making our mother's day gifts introducing the children to painting which they loved. We were able to mix colors together to make new ones and used a paint brush as well as our fingers to finish our masterpiece.
